

Integrating Thomson Reuters' new FX Trading application into existing WEY Systems and Keyboards

Situation

In the coming months, Thomson Reuters will replace the Dealing 3000 product with the **FX Trading (FXT)** application that is integrated in the Eikon platform. As a system integrator for trading room solutions, Thomson Reuters has informed WEY in advance about the specifications for video, keyboard, mouse and audio interfaces.

WEY is prepared for this transition and will provide you with quick and uncomplicated support.

Integration Solution

As a leading manufacturer of trading room solutions, WEY guarantees the **complete integration of Thomson Reuters FX Trading into new and existing WEY systems and solutions.**

Appropriate technical means (interface adapters and keypads) are now available. The integration of the WEY products can occur step-by-step, per Dealing Code and Keystation.

All integration work on WEY systems can be performed without impacting trading activities.

WEY System Benefits

The integration of the FX Trading application with a WEY Solution provides traders with the following benefits:

- Parallel operation of Dealing 3000 and FXT during the migration phase
- The existing screen surface area on trader PCs is not reduced by adding another Eikon window. As usual, the video switch screen can be used for FXT.
- Future security and feature updates can be tested and carried out separately.
- All support activities can be carried out on all the WEY Systems without intervention at the trader desk.
- Support for all major trading platforms
- WEY keyboards with the broadest selection of country codes
- The distribution of screen content and access rights remains possible
- Comprehensive hardware support
- Full support during migration to FXT
- No PCs under the desk

With WEY Solutions you can remote all your systems to create a more secure and professional trading floor environment - this applies to your hardware as well as your data. WEY Solutions create trader environments that fully satisfy compliance guidelines.

For security reasons, WEY continues to recommend connecting separate PCs with the FXT application to the video switch. A single point of failure is thus eliminated; a total system loss is not possible.

Next Steps

Please give us a quick call to learn more about an upgrade for your system.
