

## It's all about your success.

**Do you want to control multiple PCs, workstations and platforms with a single keyboard and perform complex macros with a single key stroke?**

The WEY MK06 keyboard has been designed to deliver these efficiencies. It enables fast and accurate access to multiple data sources and is able to show live data or video content using the integrated LCD. It is the ultimate tool to facilitate reliable and convenient workflow in high pressure environments like Trading Floors, Control Centres and Emergency Units. Where the need to react is the highest priority, the MK06 keyboard is in a league of its own.

Multifunctional keyboards can streamline desks but with the WEY MK06 you can do much more. Simply share PCs or use it with the WEY Allocation system to access hundreds of pooled resources, save time and money. All are designed to meet your requirements for increased security and power savings as well as heat and noise reduction.

Time has shown that once our clients have realised the full potential of the MK06, they will accept nothing less. The MK06 brings efficiencies, convenience, cost savings and success – your success.

We promise, it will be **the Key to your World.**

The MK06 replaces multiple keyboards and mice with a single compact device, “decluttering” the desktop and reducing the desk footprint. The MK06 can control up to six local or remote workstations directly, or hundreds using the WEY Allocation System.

A wide array of interfaces (PS2, USB and serial) and a broad range of platforms (PC, Reuters Dealing, SUN etc.) facilitate integration into almost all application environments.

Keyboards are programmed to meet user requirements by linking displays and configurable keys to individual PCs. With a wide range of accessories such as keypad modules, country specific key sets, coloured caps and external hard and software modules, the MK06 facilitates a vast array of options and shortcuts for each individual user.

The exterior of the keyboard can be customised with different coatings and housings. The stylish WEY RAY was designed to add sleekness to the range.

## Control your workstations.

Local sharing of services between two users with WEY Keyboards

Full flexibility on trading floors and in control centres with the WEY Allocation System

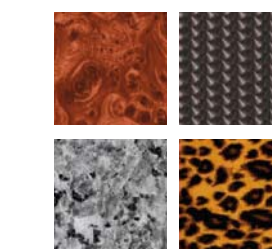

Workstations in Trading Floors, Control Centres or Emergency Units can be easily shared among multiple users by linking keyboards together in pairs or in a group. This means that workstations can be pooled and accessed by users quickly and efficiently, thus saving time and money.

The WEY Allocation System allows users to work without compromise, business to manage the resources and support staff to easily maintain the system. More notable advantages of this flexible solution are the free seating concept, sharing of sources, real time access to data and extremely high reliability.

Selection of customized keypad modules like REUTERS Dealing, EBS, Bloomberg and more
