Remote Solutions**

Information: In the right place – at the right time

Trading Rooms, Control Centres and Data Security Facilities all require the distribution and visual display of a wide variety of information and real-time data sources. As a norm, many sources need to be viewed, monitored and controlled simultaneously – often across several display monitors and workstations. WEY Technology provides the capability and solutions to fulfill system requirements and user needs in complex environments. Our technically advanced, ergonomic and sophisticated systems cover three main areas: Desktop Integration, Allocation Systems and Remote Solutions.

The Company

WEY Technology is a Swiss company operating worldwide as a leading provider of complete solutions for Trading Rooms, Security Companies and Control Centres. Our clients require the professional management of the transmission, display and control of real-time data sources to workstations, information displays and central monitoring stations.

WEY Technology designs, develops and delivers complete data and information display solutions. Our outstanding quality is achieved through the use of first-class components, Swiss quality workmanship and a stringent final inspection process. These assets are responsible for the flawless operation of our 1000 + product items.

Research and Development is at the heart of our company. Speed of product innovation, development and delivery to market, make us a leader in the provision of information display and control solutions. WEY Technology products are installed at 500 + client locations, across more than 30 000 workstations worldwide.

Additionally, WEY provides comprehensive end to end consultancy and support services. Our objective is always focused on delivering increased levels of information control and business efficiency.

WEY Technology is a dynamic company underpinned by outstanding products, exemplary client service, superior quality standards and a team of staff members who are totally committed to our ethos.

WEY Technology ...

- offers innovative and complete solutions for secure, effective and rapid information display on multiple-screen workstations.
- develops, designs and implements tailored and complete solutions with unrivalled standards of client service.
- delivers quality solutions for the global client market.
- offers professional consultancy from start to finish, and full after sales support.

Dedicated Sector-Specific Solutions

Fast and secure data delivery – wherever you require it. Dedicated high-tech products and complete solutions respond to the operational needs of four main business sectors – Financial and Commodities Trading, Security and Monitoring Control Centres, Healthcare and Infotainment. Our products deliver the capability to simultaneously display, manage and control complex real-time data streams and diverse applications.

Trading Floors

Whether for a single user, a complete trading room or an entire department with hundreds of employees, the diverse information and data required for successful trading must be secure, available and in real-time. Factors such as workstation design, ergonomics, data reliability, flexibility and ease of maintenance all play a decisive role. WEY Technology is the market leader in this segment. Our know-how and technical solutions are unrivalled

Control Centres

Security and Monitoring Control Centres (police, fire, ambulance, military and traffic control, power stations and data or call centres) are particularly dependent on the efficient and reliable display of data. The speed and accuracy of information routing, secure data transmission and processing, fast access and ease of use – are all mission critical in such demanding environments. When compromise is not an acceptable option, WEY Technology offers unique, reliable and complete solutions.

Convincing Benefits

Businesses and public sector organizations value the enhanced access to information and cost effectiveness which come with WEY products. Speed and flexibility of use, security and system reliability all ensure significant user benefits and increased levels of business efficiency.

Users benefit from efficient, ergonomic workstations and high quality images. All key information and cross-platform applications can be monitored and controlled from a single keyboard and mouse.

Business cost savings are generated by reducing energy consumption costs and data source information charges. Rapid return on investment is also made possible by simplified user change management and more effective distribution of key business information.

Health Care Solutions

In the Health Care sector, IT systems and applications are key to providing monitoring and control of critical functions in health care facilities. Effective information management and visualization require flexible display and delivery infrastructure. WEY Technology offers ideal solutions and installations for IT supported display and control functions in hospitals and clinics. Our products meet all the demanding and specific requirements for reliability, security, health and safety.

Infotainment Solutions

Our Multimedia solutions provide the simultaneous display and real-time interactive control of a variety of data sources and information with brilliant image quality. For video conferencing, auditorium presentations and information routing to decentralized information points, WEY Technology offers the know-how and technical solutions for all your data distribution, display and control needs. We will assist you from the concept and design phase through to installation, maintenance and support.

Desktop Integration Allocation Systems Remote Solutions

WEY is the specialist provider of Desktop Integration, Allocation Systems and Remote Solutions. Our products offer the highest possible levels of flexibility, information security and usability. Additionally, we are able to guarantee reduced IT infrastructure costs and simplified system maintenance procedures. Complete turnkey solutions combining all three WEY product technologies offer the greatest efficiency returns both to businesses and users. The flexibility and modularity of WEY systems mean that they can be installed individually or combined seamlessly.

Desktop Integration

WEY Technology has developed a unique range of keyboards which allow a variety of applications to be accessed and controlled simultaneously - up to 6 different computer systems, PCs and servers. In addition to being ergonomically designed and cost-effective, our multifunctional keyboards offer you decisive advantages in information handling and efficiency.

Individual workstations require only a single keyboard and mouse to access all required information sources and applications.

At team workstations, multiple users can simultaneously access single applications. The newest generations of keyboards also allow video signals (e.g. TV tuners) and data from the network (e.g. news tickers) to be displayed on integrated colour monitors.

All multifunctional keyboards can be configured individually and extensively customised in accordance with user, hardware or applications requirements. And of course, they are 100% compatible with WEY Technology Allocation Systems and Remote Solutions.

Allocation Systems

WEY Allocation Systems facilitate the secure, flexible distribution and shared use of a wide variety of information sources (TV, video, audio, Internet, software applications, stock exchange prices, etc.) among multiple workstations. As information is available to many users simultaneously, substantial savings on IT infrastructure, maintenance costs and software license fees can be achieved. A free seating concept can also be realized with an Allocation System –

as users can login at any free workstation. All Allocation Systems can be used independently of the network technology or installed hardware and software platforms. Users access real-time data and information and enjoy the best possible image quality and the highest levels of security. Allocation System solutions are available for over 250 different information sources, and the number of users can range from 4 up to 500 plus.

Remote Solutions

When multiple PCs, servers and workstations are installed at the workplace, not only do they require a great deal of space but they generate uncomfortable heat, disturbing noise and unwelcome electrical emissions. In addition, decentralized and distributed system hardware is less secure and difficult to maintain. A common system room for all your computers solves these problems. WEY Technology offers technically advanced remote solutions to centralize system hardware and deliver all the necessary information, data and application signals to the user workplace.

All types of structured cabling are supported for the transmission of signals from the system room to the workplace. Twisted pair cabling is preferred for distances up to 300 metres and fibre optic cabling for longer distances. The main advantages of a remote solution are greater security for data and systems, better protection against unauthorized access, easier monitoring and maintenance of all systems and last but not least, significantly reduced cooling costs for the office space. With WEY Remote Solutions you can implement a green IT solution and save on air conditioning costs.

Consultancy, Planning, Implementation and Customer Service

As a leading supplier of integrated solutions, WEY's primary objective is to provide clients with comprehensive and expert advice. We will always present you with options, solutions and choices which deliver rapid, secure, ergonomic, efficient and cost effective business benefits.

Consultancy

Project consultancy begins with the definition of your needs and business objectives. Consideration is given to all technical, organisational and environmental aspects. Ongoing consultancy and monitoring is provided from initial planning through to project implementation and completion.

Design and Planning

WEY Technology engineers are specialists in innovative solutions with years of experience in system design and implementation. Detailed designs and accurate planning are key to delivering cost effective client solutions. WEY is able to support you from your initial concepts all the way through the design and build stage to final installation. Our team of experienced design engineers is always on hand to deliver optimised proposals and system specifications, and our project managers work along side you at all times.

Installation

Timely and efficient installations result from our detailed specifications and planning processes. WEY Technology meets client timescales and implementation requirements. All our installation engineers are experienced specialists who take professional pride in delivering smooth and successful implementations.

Training

All WEY Technology solutions come with comprehensive documentation and full client training. Informed and trained users achieve the greatest business benefits from our products. It is that simple, and that is why we pay great attention to delivering quality training.

Maintenance

Following installation, WEY provides first-class customer maintenance and support services. WEY Field Engineers are available during normal business hours and we can provide 24 x 7 standby support for critical problems. We never forget that our reputation is based on your satisfaction.

References

We are proud to count many renowned and leading world-wide companies as our customers. Below is a short extract from our reference list:

- HSBC
- Citigroup
- UBS
- Credit Suisse
- Deutsche Bank
- Royal Bank of Scotland
- Morgan Stanley
- Sydbank
- ING
- Bank of America
- JP Morgan Chase
- Fortis Bank
- BNP
- ABN Amro
- Dresdner Bank
- Bank Julius Bär
