

Project Management and Consulting

Professional Services

WEY offers over 25 years of experience in professional Project Management for integrated turnkey solutions around the globe.

Individual consultancy is the cornerstone of our service model.

From Customer Needs to Solutions

WEY customers span the globe. We serve hundreds of the world's leading financial institutions as well as major control centres for emergency services, public transportation and energy providers. WEY provides client solutions in more than 40 countries.

For over 25 years we have developed, produced and delivered customised Desktop, Allocation and Remote Solutions. WEY is independent and our systems have proven to be cost effective as well as future-proof.

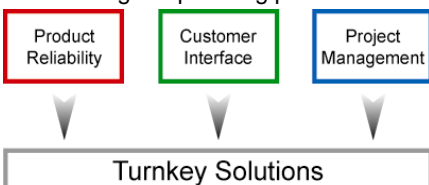

Needs assessment

As a market leader, it is very important to us that we provide you with expert and comprehensive advice. We reveal potential for improvements and present opportunities to enhance the efficiency of your working environment. For complex client projects, we conduct in-depth analysis and feasibility studies.

Test installation

The best way to assess the practical advantages of a WEY Solution is to observe, test and evaluate it in an operational environment.

We can implement a test installation on your premises or arrange for a tour of a customer site near you. Alternatively, allow us to organise a workshop in our Swiss Competence Centre. Discover how an optimal system looks and feels, even during the planning phase.

Project Management

Whether it is a new build, renovation or expansion, our trained and experienced PMs manage the full complexity of your project. They coordinate our in-house R&D, Production and Field Engineering on your behalf and maintain an ongoing dialogue with your team.

Concept and Cost Calculation

Using state-of-the-art tools, our highly skilled specialists develop technical concepts, define specifications and calculate project costs. The WEY model approaches every challenge with the same thoroughness, from 1 to 500 workplaces.

Customised Solutions

We aim to deliver the optimal solution for you in terms of usability, reliability, data security, speed, infrastructure, environmental and safety requirements.

In addition to standard products, we have the resources to develop new solutions tailored to your specific needs.

Security and Certification

Security procedures are an important issue in today's market. WEY has been certified for security clearance from the Swiss government and our business processes comply with the ISO 9001 standards.

Multi-Vendor Solutions

Selecting optimal office and system room infrastructure (e.g. PCs, monitors, cabling, air conditioners, racks and even furniture) has investment and operational cost implications.

We are delighted to share our extensive experience in creating turnkey multi-vendor solutions and providing end-to-end Project Management.

Implementation

WEY is renowned for detailed planning, smooth logistics and impeccable timing during the installation phase. Site launches are usually scheduled for evenings and weekends. WEY Field Engineers ensure that transition times are kept to an absolute minimum. The Project Manager retains full responsibility until all client acceptance criteria are fulfilled.

Support & Maintenance

After handover, WEY offers a full suite of professional support services including a customer hotline, technical diagnostics, annual site reviews, software updates and preventative maintenance.

Training

WEY offers both standard and customised product training out of our Swiss location.

Our in-house courses emphasize hands-on experience and classes are limited in size. We place great importance on providing comprehensive training for your IT support staff and effective on-site instruction for users.

Highlights

- 25 years of industry experience
- Future-proof solutions for trading floors and control centres
- One-on-one consultancy services with highly skilled Project Managers
- Professional turnkey solutions
- Test installations & workshops
- Standard & customised solutions
