DULLES, Va., Oct. 16, 2019 /PRNewswire/ -- Raytheon Company (NYSE: RTN) has signed a teaming agreement with WEY Technology (WEYTEC), a global leader in advanced data visualization and operator control solutions, to co-develop the next-generation air traffic controller workstation called Multi-platform ATC Re-hosting Solution, or MARS.

Raytheon, WEY Technology (WEYTEC) co-develop the next-generation air traffic controller workstation called Multi-platform ATC Re-hosting Solution, or MARS.

"As the skies grow more crowded, controllers need the best technology to efficiently manage the airspace," said Matt Gilligan, vice president, Raytheon Intelligence, Information and Services. "Not only will MARS workstations make their jobs easier, they will make the world's airspace system safer."

Today in the U.S., air traffic controllers use Raytheon's Standard Terminal Automation Replacement System, or STARS, to provide safe and efficient aircraft spacing and sequencing guidance for more than 40,000 departing and arriving aircraft daily at both civilian and military airports.

The Raytheon-WEYTEC team aims to replace the current systems, and similar ones abroad, with advanced, modern workstations that seamlessly integrate flight-critical applications, such as surveillance, weather, flight and airport data, onto touchscreens for enhanced airspace management.

WEYTEC, a Swiss company, brings smart tech to airport command and control centers around the world through the transmission, control, distribution and display of real-time data critical to efficient flight operations.

"Our integrated keyboard, video, and mouse switch solutions are autonomous, scalable, and IP-based, which makes them ideal for complex multiscreen workplaces like those found in air traffic control management," said Armin Klingler, Chairman of the Board of WEY Group AG.

About Raytheon

Raytheon Company, with 2018 sales of \$27 billion and 67,000 employees, is a technology and innovation leader specializing in defense, civil government and cybersecurity solutions. With a history of innovation spanning 97 years, Raytheon provides state-of-the-art electronics, mission systems integration, C5I™ products and services, sensing, effects and mission support for customers in more than 80 countries.
