WEYTEC Environmental Policy

This document outlines WEYTEC's commitment to environmental protection, sustainability, and continuous improvement.

Commitment to Environmental Protection

Our organization is committed to protecting the environment as a fundamental principle of our operations. We are proud that our solutions help our customers become more efficient in their processes and energy consumption. However, we also recognize that our business has an impact on the environment, and we commit to reducing this impact, safeguarding ecosystems, and preserving natural resources for future generations. Environmental considerations will be an essential part of our decision-making processes and operational activities to foster a culture of environmental responsibility across all levels of the organization.

Commitment to Achieve Net Zero Goals

In alignment with global climate commitments, we pledge to achieve Net Zero carbon emissions in line with legislation across all parts of our business. We will set and pursue clear targets for greenhouse gas (GHG) emissions reductions, invest in sustainable practices, and integrate innovation to ensure that we contribute to climate change mitigation.

Minimizing Environmental Impact Across the Life Cycle

We will evaluate and minimize the environmental impact of our business activities, from component acquisition to product or service end-of-life. Our approach focuses on improving sustainable practices, optimizing resource use, and selecting suppliers and partners that adhere to similar environmental values. We aim to prevent or reduce negative environmental impacts through life cycle assessment and adherence to best practices.

Reduction of Pollution, Emissions, and Waste

Our environmental management system will reduce pollution, emissions, and waste across all aspects of our operations. We are committed to compliance with relevant environmental laws and regulations and will actively work to prevent and minimize pollutants released into the air, water, and soil. Furthermore, we will promote initiatives that reduce waste generation, encourage recycling and reuse, and manage disposal responsibly.

Energy Efficiency and Transition to Renewable Energy

We will develop and implement strategies to improve energy efficiency and support the transition to renewable energy sources. This includes investments in energy-efficient equipment and promoting energy-saving behaviors within the organization. We are committed to transitioning our energy sources to renewables, aiming to reduce reliance on non-renewable energy and lower our carbon footprint.

Sustainable Sourcing of Materials

Our organization will promote the use of environmentally friendly materials, particularly those sourced from sustainably managed resources. Additionally, we will work closely with suppliers to encourage sustainable practices in their operations, fostering a responsible supply chain that contributes to broader environmental goals.

Implementation and Monitoring

To ensure the success of this policy, we will maintain an environmental management system, establish clear goals, and regularly assess our progress. Environmental targets will be reviewed and updated periodically to reflect advancements in science and technology, stakeholder feedback, and regulatory changes.

Continuous Improvement

Environmental protection is a continuous journey. We are dedicated to regularly reviewing our environmental policies and practices, identifying areas for improvement, and integrating new strategies to enhance our environmental stewardship. Through these efforts, we aim to minimize our environmental footprint and contribute positively to communities and ecosystems. We aim for ongoing improvement of our Environmental Management System (EMS) and environmental performance.

Environmental Policy Principles

This environmental policy applies to all locations, processes, and activities of our company.

Responsibility

Top management is responsible for implementing and complying with this environmental policy.

Environmental Protection

- We actively strive to protect the environment by avoiding and reducing environmental impacts.
- We promote responsible and sustainable use of resources.

Compliance with Binding Obligations

- We comply with all applicable legal and regulatory environmental requirements.
- We also consider all voluntarily assumed obligations.

Risk Management and Opportunities

- We regularly identify and assess environmental aspects to minimize risks and leverage opportunities.

Communication and Awareness

- We foster open and transparent communication on environmental issues.
- We train and raise awareness among our employees for environmentally responsible behavior.

This environmental policy serves as our commitment to sustainable business practices, resource conservation, and support for a healthier planet.

This policy supports the activities and procedures included in the white paper “The green WEY forward”, which is the reference for the commitment of the WEYTEC group.

The Management of WEYTEC
